Fund Category	Money Market.
Fund Type	Income.
Investment Objective	<p>AmCash Management is a short-term money market fund which aims to provide you with a regular stream of monthly income*. It is managed with the aim of maintaining the Fund's NAV at RM1.00.</p> <p><i>Notes: Any material change to the investment objective of the Fund would require unit holders' approval.</i></p> <p>* The income could be in the form of units or cash.</p>
Investment Strategy	<p>The Fund seeks to achieve its objective i.e. to provide investor with a regular stream of monthly income and maintaining the Fund's NAV at RM1.00 by investing in RM-denominated high-quality short-term money market instruments with the following minimum credit rating:</p> <p>i. Short-term credit rating of P1 by RAM or its equivalent as rated by a local or global rating agency; or</p> <p>ii. Long-term credit rating of A1 by RAM or its equivalent as rated by a local or global rating agency.</p> <p>If the credit rating of the instruments falls below the above minimum rating, the Fund may dispose of the investment. However, the Fund reserves the right to maintain the investment if the downgrade is a temporary event.</p> <p>All income from the investments will be accrued and allocated to Unit Holders on a daily basis in order for the Manager to maintain a stable NAV per unit of RM1.00. However, please note that the Fund is not a capital protected or capital guaranteed fund as defined under the SC Guidelines.</p>
Asset Allocation	<ul style="list-style-type: none"> <li>• At least 90% of the Fund's NAV will be invested in money market / Islamic money market instruments and short-term fixed income / Shariah-compliant short-term fixed income instruments; and</li> <li>• Up to 10% of the Fund's NAV in cash.</li> </ul>
Base Currency	Ringgit Malaysia (RM).
Performance Benchmark	<p>Malayan Banking Berhad Overnight Rate.</p> <p>(source: <a href="http://www.maybank2u.com.my">www.maybank2u.com.my</a>)</p> <p><i>Note: The benchmark does not imply that the risk profile of the Fund is the same as the risk profile of the benchmark. Investors of the Fund will assume a higher risk compared to the benchmark. Hence, the returns of the Fund may be potentially higher due to the higher risk faced by the investors.</i></p>
Launch Date	<p><b>Class A (for non-individual investors):</b> 28 November 1986</p> <p><b>Class B (for individual investors):</b> 20 December 2021</p>
Distribution Policy	<p>Income is calculated daily and paid monthly within 14 days after the last day of each month or on full redemption.</p> <p>At the Manager's discretion, the Fund may distribute from its gain, income and capital. The rationale for distribution out of capital is to allow the Fund the ability to (i) distribute income on a regular basis in accordance with the distribution policy of the Fund or (ii) increase the amount of distributable income to the Unit Holders, after taking into consideration the risk of distributing out of capital.</p> <p>Distribution out of the Fund's capital has the effect of lowering the NAV of the Fund, may reduce part of the Unit Holders' original investment and may also result in reduced future returns to Unit Holders. When a substantial amount of the original investment is being returned to the Unit Holders, it has a risk of eroding the capital of the Fund and may, over time, cause the NAV of the Fund to fall. The greater the risk of capital erosion that exists, the greater the likelihood that, due to capital erosion, the value of future returns would also be diminished.</p>

## What are the possible outcomes of my investment?

Best Case	Income distribution.
Mid Case	No significant change in investment i.e. no income distribution.
Worst Case	Capital loss and with no income distribution.

## What are the key risks associated with the Fund?

### General risks associated with investing in a unit trust fund

Market Risk	Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors resulting in a decline in a fund’s net asset value.
Inflation Risk	This is the risk that investors’ investment in a fund may not grow or generate income at a rate that keeps pace with inflation.
Manager’s Risk	This risk refers to the day-to-day management of a fund by the manager which will impact the performance of the fund.
Non-Compliance Risk	This is the risk of the manager, the investment manager or the trustee not complying with their respective internal policies, the deed and its supplemental deeds, securities law or guidelines issued by the regulators relevant to each party, which may adversely affect the performance of a fund.
Loan Financing Risk	This risk occurs when investors take a loan/financing to finance their investment. The inherent risk of investing with borrowed money includes investors being unable to service the loan repayments.
Country Risk	Investments of a fund in any countries may be affected by changes in the economic and political climate, restriction on currency repatriation or other developments in the law or regulations of the countries in which the fund invests in.
Suspension Risk	Refers to situation where the Manager suspends dealings of units in a fund (no redemption or subscription are allowed) under exceptional circumstances as set out in the Prospectus - Temporary suspension of determination of NAV and of the issue, switching and redemption of units. Suspension of a fund may potentially result in unit holders not being able to redeem their units into cash based on their liquidity needs and their investments will continue to be subject to the risk factors inherent in the Fund.

### Specific risks associated with the Fund

Credit And Default Risk	Credit risk relates to the creditworthiness of the issuers of the fixed income instruments and their expected ability to make timely payment of profit or interest and/or principal. Default risk relates to the risk that an issuer of a fixed income instrument either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the fixed income instruments.
Unstable Nav Risk	This is the risk that the actual NAV per unit of the Fund fluctuates and may not be maintained at or above its initial NAV per unit of RM1.00 at all times.
Income Distribution Risk	The distribution of income is not guaranteed.
Liquidity Risk	Liquidity risk refers to the ease of liquidating an asset depending on the asset’s volume traded in the market. If the Fund holds assets that are illiquid, or are difficult to dispose of, the value of the Fund and consequently the value of the Unit Holders’ investments in the Fund will be negatively affected when it has to sell such assets at unfavourable prices.
Interest Rate Risk	Interest rate risk refers to the impact of interest rate changes on the valuation of fixed income instruments. When interest rates rise, fixed income instruments prices generally decline and this may lower the market value of the Fund’s investment in fixed income instruments. The reverse may apply when interest rates fall.
Counterparty Credit Risk	Counterparty credit risk is the risk arising from the possibility that the counterparty may default or not able to fulfill a trade settlement prior or on the settlement date of the trade. This could adversely affect the value of the Fund.

**Note: The abovementioned risks which investors should consider before investing into the Fund should not be considered to be an exhaustive list. Investors should be aware that investments in the Fund may be exposed to other unforeseeable risks from time to time. Investors are advised to consult their professional adviser.
