AmFunds Management

Fund Factsheet October 2026

AmSustainable Series - Climate Tech Fund

Fund Overview

Investment Objective

AmSustainable Series - Climate Tech Fund (the "Fund") seeks to provide long-term capital growth.

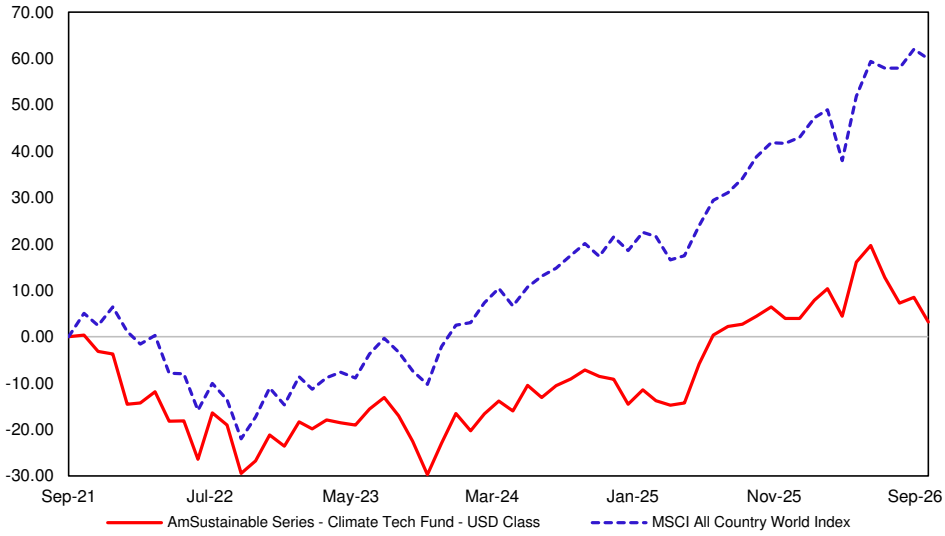

The Fund is suitable for Sophisticated Investors[1] seeking:

- potential capital appreciation over a long-term investment horizon; and
- participation in the global equity market.

Note: *Long-term refers to a period of at least five (5) years.
Any material change to the investment objective of the Fund would require Unit Holders' approval.
This material is not intended for non-sophisticated investors. [1]Please refer to the definition of "Sophisticated Investor" in the Information Memorandum.

Fund Performance (as at 30 September 2026)

Cumulative performance over the period (%)

Performance Table in Share Class Currency (as at 30 September 2026)

Cumulative Return (%)	YTD	1 Month	6 Months	1 Year	3 Years	5 Years
Fund (USD)	-0.72	-4.84	-1.16	-1.15	33.26	3.20

Source Fund Return: Novagni Analytics and Advisory Sdn. Bhd.
Note: There is no record of the Fund's performance for five (5) years as the Fund was launched in less than five (5) years.

The returns presented are net of all relevant fees, charges, and costs associated with the wholesale investment. These may include, but are not limited to, management fees, trustee fees, and other applicable charges. Over time, such fees and charges can materially reduce the overall returns on your investment.

It is important to note that the sales charge is deducted upfront and directly reduces the amount of the initial investment that is allocated to the fund, which in turn can have the effect of lowering returns to investors in the long run. These costs may be deducted from your investment amount, from the returns generated, or directly from the Fund's assets, and are reflected in the unit price (NAV per unit). This includes expenses related to the marketing and distribution of the Fund. Additionally, all fees and charges payable to the Manager and the Trustee are subject to applicable taxes and/or duties, which may vary from time to time as imposed by the government.

Given the impact these costs can have on your investment returns, investors are strongly advised to read and understand the contents of the Fund's information memorandum and consider the cumulative impact of these costs before making any investment decision.

Past performance is not necessarily indicative of future performance and that unit prices and investment returns may go down, as well up.

Income Distribution History

	Total Payout per unit (Sen)					Yield (%)				
	2026	2025	2024	2023	2022	2026	2025	2024	2023	2022
MYR	0.62	N/A	N/A	N/A	N/A	0.62	N/A	N/A	N/A	N/A
MYR-Hedged	15.83	N/A	N/A	N/A	N/A	17.08	N/A	N/A	N/A	N/A

Source: AmFunds Management Berhad
Historical income distribution is not indicative of future income distribution payout. The income could be in the form of units or cash. Unit prices and income distribution, if any, may rise or fall. Where an income distribution is declared, investors are advised that following the distribution the net asset value per unit will be reduced from cum-distribution NAV to ex-distribution NAV.

Target Fund Manager's Commentary (as at 30 September 2026)

In September, portfolio activity remained limited and primarily reflected a continued rotation away from AI and data center beneficiaries toward higher-quality, more defensive industrial companies with increasingly attractive valuations and risk-reward profiles.

Key portfolio additions: Fund management added new exposures in the area of disaster prevention with a German property and casualty reinsurance company and a US based insurance data and analytics provider – both stocks should add some defensive characteristic to the portfolio and benefit. Exposure to German solar inverter company was slightly increased. The other key change was the switch from an Italian integrated utility into a Spanish peer which invests more heavily in its regulated network assets, which should be less impacted in an adverse rates environment.

Key portfolio reductions: The fund exited a small position in an onshore/offshore geotechnical surveying company, as the anticipated recovery in the European offshore wind industry took a pause. On the other hand, the fund reduced its risk position in a Chinese battery manufacturer – while the long-term structural case is still intact, it's prudent to reduce active risk given the adverse headlines and deteriorating investor sentiment. Finally, the position in a biofuel producer got lowered after having benefited from rising diesel prices globally.

As a result, the portfolio's allocation to climate mitigation themes declined from approximately 85% in March to around 77% at month-end. The remaining allocation is invested in climate adaptation and resilience opportunities, including water scarcity, cooling solutions, resource efficiency, and disaster prevention. Geographically, Europe and North America each account for approximately 45% of portfolio exposure, with Asia representing the balance.

The strong performance of clean tech equities is not merely cyclical, but reflects a structural shift in the global energy and economic landscape. Geopolitical tensions and recurring supply shocks have once again elevated energy security to a top political and economic priority. Across Europe and Asia, the expansion of domestic renewable energy capacity is increasingly viewed less as a climate policy tool and more as a key pillar of economic resilience, supply security and geopolitical sovereignty. Structural demand drivers remain firmly intact. Electricity demand is rising sharply, driven by data center and AI infrastructure expansion, electrification of transport and industry, and ongoing reshoring of manufacturing. Power grids are already operating near capacity in many regions, resulting in higher congestion costs, renewable curtailments and greater price volatility. This underscores the urgent need for sustained investment across the entire power value chain—from generation and transmission to distribution networks, transformers, power electronics, storage and monitoring software. Renewables continue to benefit from both economic and strategic advantages. Utility_scale solar and wind remain among the fastest and most cost_effective sources of new power generation globally, while hyperscalers' willingness to pay premium prices for clean, firm capacity further strengthens project economics. Energy storage is increasingly emerging as a critical system enabler, supporting grid stability, load shifting and security of supply. Technological innovation continues to accelerate adoption. Advances in battery chemistry, charging speeds and system integration are improving the economics of electric vehicles, stationary storage and distributed energy solutions. While valuations have recovered from their 2024 troughs, we believe this is underpinned by high order visibility, scaling benefits and improving cost structures, supporting solid earnings momentum across the sector.
