Note:

- (1) Total return is the actual return of the Fund for the financial periods/year computed based on the net asset value per unit and net of all fees. Fund return is calculated based on the published price (last business day).
- (2) Total expense ratio ("TER") is calculated based on the total fees and expenses incurred by the Fund divided by the average fund size calculated on a daily basis.
- (3) Portfolio turnover ratio ("PTR") is calculated based on the average of the total acquisitions and total disposals of investment securities of the Fund divided by the average fund size calculated on a daily basis.

Rebates and Soft Commission	During the period, the management company received soft commissions by virtue of transactions conducted for the Fund, in the form of research services, systems and services relating to performance measurement of portfolios and subscription fees for fund's benchmark indices. All of these assist in the investment decision making process which are of demonstrable benefit to unitholders of the Fund. The company has soft commission arrangement with a total of 12 brokers, who execute trades for the Fund and other funds or investments managed by the company. The soft commission received would be in the form of research services, systems and services relating to performance measurement of portfolios and/or subscription fees for fund's benchmark indices. All of these assist in the investment decision making process which are of demonstrable benefit to unitholders of the Fund.
Market Review	The S&P New China Sectors (A-shares capped) index exhibited a strong 12.32% return from December 2024 to February 2025. During this period, the Chinese equity market experienced notable growth fuelled by the introduction of "DeepSeek," a more efficient generative AI model. The upsurge in the index was primarily driven by the new economy segments, namely technology sector. Moreover, China encountered a rise in consumer inflation to its quickest pace in five months in January, contrasting with persistent producer price deflation, reflecting a blend of consumer spending patterns and subdued factory operations. Concurrently, the Hang Seng index rose from 19,000 to the 23,000 during the period. Notably, Alibaba(9988.HK), the fund's largest holding, delivered over a 50% return.

Market Outlook	We hold a positive long-term outlook on China's new economy sectors, but short- term concerns arise due to Trump's tariff policies, posing risks to global economic stability. The escalation in trade barriers may disrupt supply chains, increase production costs, and dampen trade volumes, potentially impeding global economic growth under the new regime. Nevertheless, we expect Chinese equities to exhibit resilience, supported by attractive valuations relative to historical levels and other emerging markets. The recent pullback could offer an opportune entry point, with several catalysts propelling this optimistic outlook:
	The success of "DeepSeek" signals strong growth potential in China's technology sector, fostering self-sufficiency and economic expansion.
	Valuation-wise, the S&P New China Sectors (A-shares capped) remains appealing with an anticipated P/E ratio of 13.2, well below historical averages(18.7), or in contrast to the Nasdaq-100 Index at 25.6.
	The China new economy sectors, for example, those tilts towards domestic consumption, will align favourably with the expected stimulus agenda from the Chinese authorities amidst the trade war.
	Furthermore, anticipated stimulus measures from China authorities and a noticeable easing of regulatory scrutiny on private enterprises enhance the prospects for a rebound. While near-term volatility is unavoidable, these factors collectively position the China's new economy sectors for recovery over the medium term.
